

BEST PRACTICES / mobile styles

You can edit the mobile styles in the template tool (MATT)!

Admins can now independently edit the mobile style of any template you create with the Template Tool.

To edit the mobile styles for the overall template, select the **Template** tab, then select **Mobile Styles**.

You can also edit the mobile style for any specific section, or column block. Do this by hovering your mouse over the column, or section, and clicking **Edit Column**, or **Edit Section** respectively.

With this feature you are also able to *hide* entire sections or columns from the mobile version.
